

GAMMON

The Howard Gammon Aviation Fuel Quality Symposium

September 15–16, 2026

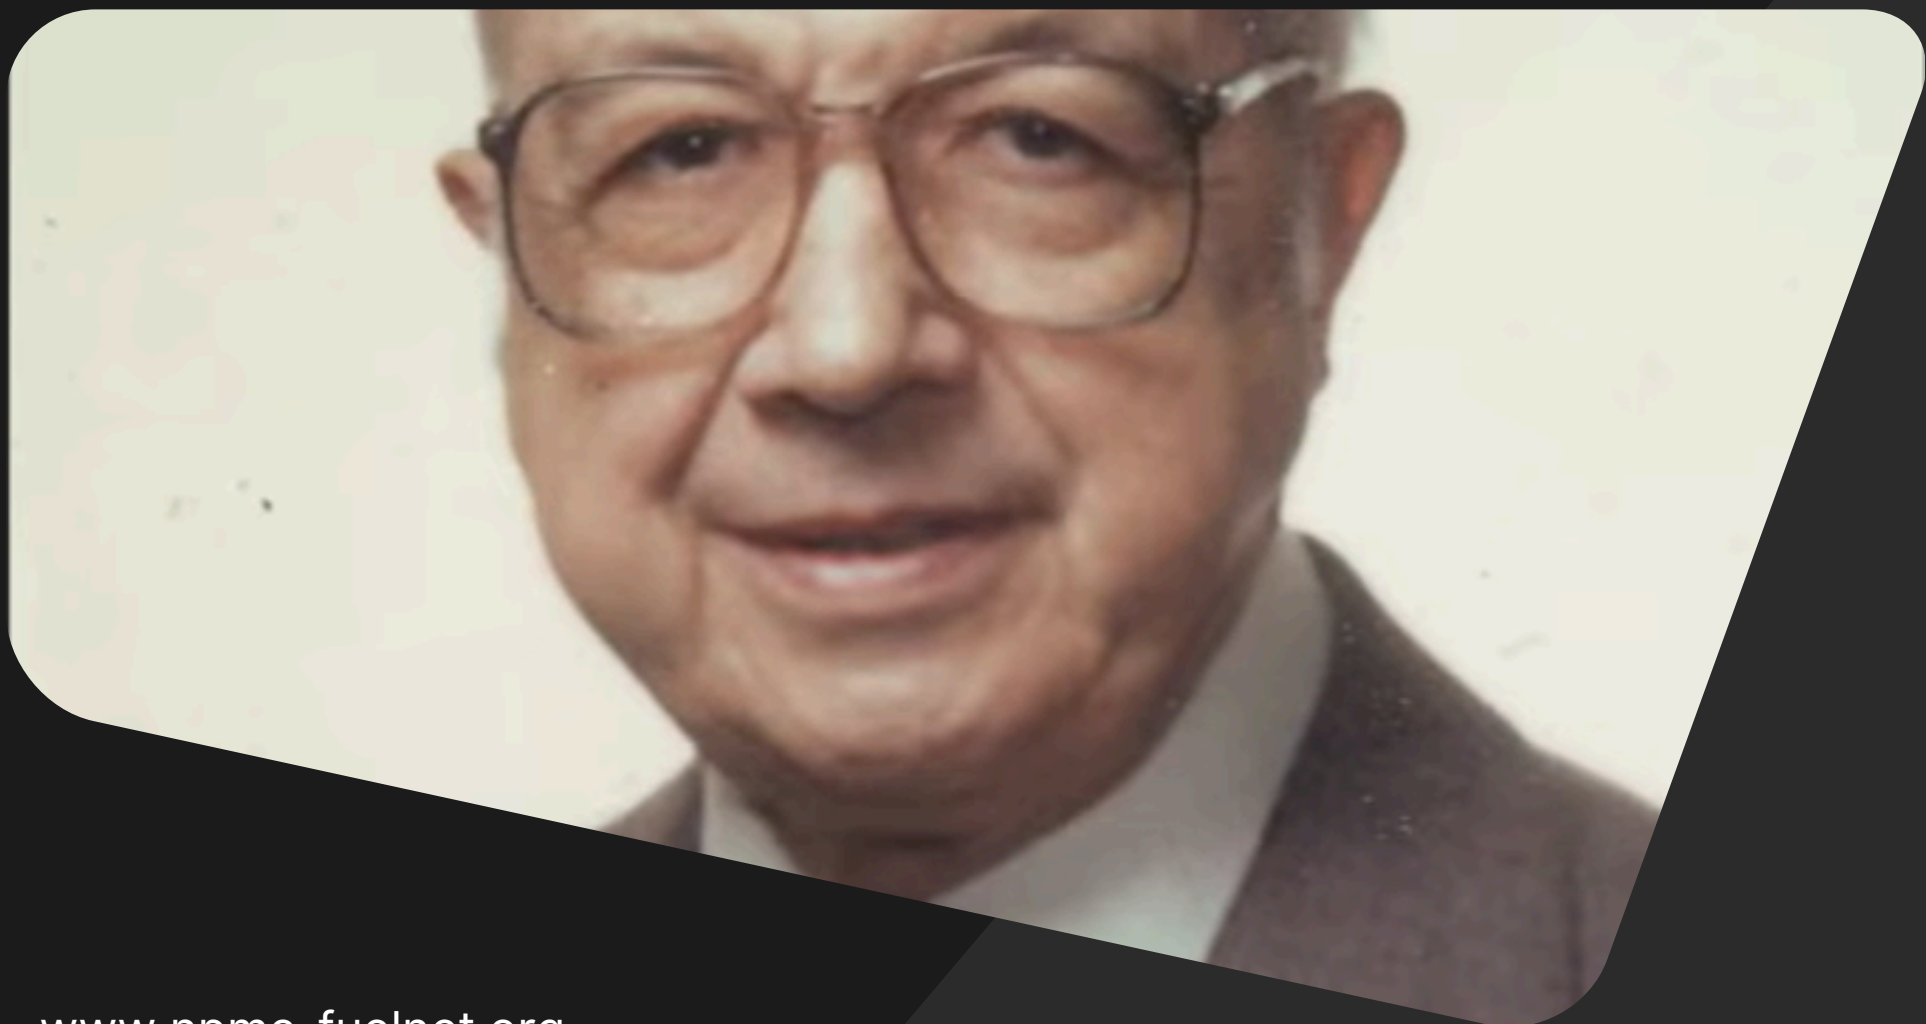

Swipe to know >>>

What

The **Howard Gammon** Aviation Fuel Quality Symposium

The National Petroleum Management Corporation is honored to announce the continuation of a long-standing industry tradition.

For years, Gammon Technical Products set the standard for meaningful technical dialogue and collaboration in aviation fuel quality. It is both a responsibility and a privilege to carry this symposium forward, and to do so under the name of **Howard Gammon**, whose impact on our industry continues to be felt.

Content

This two-day symposium will bring together operators, engineers, manufacturers, and industry leaders to engage in practical, experience-driven discussions across:

- Aviation fuel quality and compliance
- Operational challenges and best practices
- Equipment design, performance, and commissioning
- Emerging topics including SAF and additives
- Workforce development and industry sustainability

This is a working session for the industry.

More details, including agenda and registration, will be shared soon.

We look forward to continuing the legacy and advancing the conversation.
